Re: Breakrooms/Mold

Mike:

I have been hearing from my members that there are still danger signs which reads, '**Microbial Hazard**'. The last time I mentioned this, maybe a week or two ago, I was told that there was no mold, but now there is talk that it is mold.

I have a few questions that I presented back a couple of weeks ago that I hope you can answer for me:

1. Who determined that the **Microbial Hazard** should be posted?
2. Are there any air samples being taken and analyzed at the current time?
3. What are the **Microbial Hazards** that were specifically found?

Can you please provide an update as to what is going on with the status of the signage, and what the '**Danger Microbial Hazard**' sign means, and is any of this a potential/possible harm to the employees. The APWU takes safety seriously, and anything that can or could affect the bargaining unit employees we represent is of the utmost importance to me.

I am asking you to look into this condition and respond back to me as rapidly as possible. If you have any questions or concerns feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Joe Paul".

President
